Putting knowledge to work to improve our community!

- The Environmental Horticulture and Natural Resources Program focus on an array of gardening, agricultural, and community health topics. Our current priority areas are Climate Change and Food Systems.
- The 4-H Program is a youth development initiative with a range of clubs and activities for kids from age 5-19.

Lakeshore Buffer Plantings Promote Healthy Lakes

"A lake is the landscape's most beautiful and expressive feature. It is earth's eye; looking into which the beholder measures the depth of his own nature."

~ Henry David Thoreau ~

Lakeshore Buffer Plantings

Promote Healthy Lakes

OBJECTIVES:

4

Explain the Importance of Lakeshore Buffer Plantings

Identify Best Management Lakeshore Buffer Practices

Cornell Cooperative Extension Putnam County Maureen Galway-Perotti, Master Gardner Volunteer / Lake Oscawana Management Advisory Committee (LOMAC), Town of Putnam Valley

Clean Water and Healthy Ecosystems:

- Living in Kent, N.Y.
- Enhance our recreational experiences
- Provide fish and wildlife habitat
- Protect lake property values

Kent, N.Y., a rural community 60 miles north of New York City, is characterized by an abundance of pristine lakes and affordable real estate. It's also home to the Chuang Yen Monastery, a Buddhist center.

Best Practices for Living in a Lake Community

Cornell Cooperative Extension Putnam County Maureen Galway-Perotti, Master Gardner Volunteer / Lake Oscawana Management Advisory Committee (LOMAC), Town of Putnam Valley

Let's Make Healthy Lakes Together

What you can do to help our lakes:

1. Maintain your septic system

2. Manage your lawn to prevent pollution

10

3. Be aware of your land use

4. Support local lake clean up efforts

Maintain your septic system

- Pump and Inspect once every 2 3 years
 - Putnam Valley Town Code, Part II General Legislation Chapter 90: Septic Tank Pump Out Requirements for Protection of Lake Oscawana District
 - Section 90-3: Pump Out Requirements
- Protect your leaching area
 - Keep it free of Vehicles & Encroachments
 - Maintain grass cover

Manage your lawn to prevent pollution

• Follow Town Code

- Putnam Valley Town Code, Part II General Legislation, Chapter 88: Phosphate Fertilizer – prohibits use of fertilizer containing phosphorus or any compound containing phosphorous (such as phosphate) to any outdoor location within the Town
- Look for the Zero!
- Minimize grass areas
- Use more native shrubs and ground cover

Be aware of your land use

- Properly store and dispose of **oil** and **toxic liquids**
- Do not dump anything into storm drains
- Clean up after your pets

Where do Buffers fit into all this?

The Federation of Vermont Lakes and Ponds

Buffers are Crucial

SINGLE MOST EFFECTIVE PROTECTION for

- Water Quality
- Lake Ecosystems
- Essential Wildlife Habitat

How do Vegetative Buffers Work?

Protect Water Quality by:

✓ Filtering Run Off

✓ Absorbing
 Excess Nutrients
 (Phosphorus & Nitrogen)

Slowing Eutrophication

The Federation of Vermont Lakes and Ponds

Buffer Benefits

□ Filter Run Off

Absorb Excess Nutrients

□ Slow Eutrophication

Stabilize Shoreline

Preserve Habitat

Screen Noise

Deep-rooted native trees and shrubs stabilize the shoreline, provide a buffer against pollution, and improve habitat for lake fish and wildlife.

U.S. Environmental Protection Agency

Enhance Aesthetic Value

What is a Buffer?

The Buffer Concept

- Strips of Vegetation
 - ground covers
 - herbaceous plants
 - shrubs
 - trees
 - organic matter that accumulates on the ground
- Transitional Areas
 - where land and water meet
 - creates unique and highly productive ecosystems

Best Management Lakeshore Buffer Practices

- Minimum 25' vegetated buffer at the shore
- Multi-layered lakescape gardening with native plants
- No-mow zones and native wildflower meadows
- Meandering paths & infiltration steps to reduce erosion
- Water access no more than 16' wide

The Federation of Vermont Lakes and Ponds

Observing the Golden Rules: Land

- Strict minimum use of riparian strip
- Activities away from water
- Less, and low maintenance lawn

• Vegetable garden outside riparian strip

Shoreline Management Guide, Lake Champlain Basin Program's (LCBP) Education and Outreach program.

Golden Rules: Water View/Access

- Diagonal water access
- Use of porous materials and replanting along border
- Water view no more than 16 feet wide
- Floating Dock

Golden Rules: Bank Stabilization

Natural stabilization methods

"Soft Armor" (live plants, logs, root wads , vegetative mats)

Easier on environment
Imitates natural systems
Lasts longer & costs less
Alive

 adapts to changes in environment
 reproduces & multiplies
 Provides habitat
 Trimmed to keep view

Golden Rules: Bank Stabilization

Restrict structural methods to problematic bank areas

"Hard Armor" (rock rip-rap, stone blocks, sheet-pile , bulk heads, retaining walls other hard materials)

• Planting in hard armor to reduce water warming

• Never use wood treated with toxic substances

Successful Planting: When & How

• When to plant:

Spring to mid-June, or in the fall at the end of August.

• How to plant:

Do not modify the soil texture so plants can adapt to the natural surrounding conditions.

- Caring for plants:
 - Do not fertilize!

Introduction of nutrients (nitrogen & phosphorus) contributes to eutrophication. Prune shrubs

Choosing Suitable Plants Right Plant for Right Place

- Choose native species
- Consider sun exposure & soil type
 - Sun, partial shade, full shade
 - Texture clay, silt, sand, loam, gravel
- Consider water level & roots
 - Wet or dry soil
 - Top of slope Trees (deep spreading roots)
 - Bank Shrubs (combination of deep & superficial intertwined roots) Herbaceous plants (fine surface roots)

Lakeshore Buffer Plantings

Woody Shruhs. These shrubs are under four feet and ideal for lakeshore buffer plantings. Clehra alnifolia 'Hummingbird', Hummingbird', Sammersvert, J'. This dwarf selection is a fragrant summer bloemer with beight yellow fall color.

- Foshergilia gardenii 'Mt Airy', Dwarf fothergilla, 3', Blooms early, remains small. Clear yellow
- Her verticillata 'Red Sprine' or 'Maryland Beauty' 3-4' Are dwarf varieties of our native
- Her verticillata 'Red Sprite', or 'Marytand Beauty' 3-4' Are dwarf van Winterberry Holly. They sparkle with berries in late fall and early winter
- Iter globa: 'Shamrock', 'Nana' or 'Densa' 3' These dwarf varieties of the native Inkberry Holly provides some even preen interest in your instancept.
 • Their virginiane 'Little Henry', Little Henry Sweetspire, 3'. This dwarf variety grows to three feet, becomes profusely in summer months and has spectacular scatter fall color.
- Rhododendron viscossen, Swamp Azalea. 4-5 Though taller, is airy in form. Fragrant pink flowers grace this welcome spring bloener. Phur aromatica 'Grow Low' 2-3' Fragmant Sumae', Widely adaptable: will tolerate areas of

compacted soil and drought as well

What to Plant

PLANT LISTS

Scientific Name Common Name

Woody Shrubs Herbaceous Plants

Chosen for adaptability to both Upland and Wetland Settings

Trees for Tribs

Watershed Agricultural Council

35

Mission: Promote the protection and improvement of water quality in partnership with the Croton watershed communities through the establishment, enhancement, and restoration of riparian forest buffers.

Offer: Free trees and shrubs to eligible landowners in the Croton Watershed, conduct site visits, delineate planting areas, plant selection, provide deer damage protection.
